

P13 TRANSCRIPT – JUPYTER NOTEBOOK

00:19

Observer: You're not familiar with this tool, right?

00:21

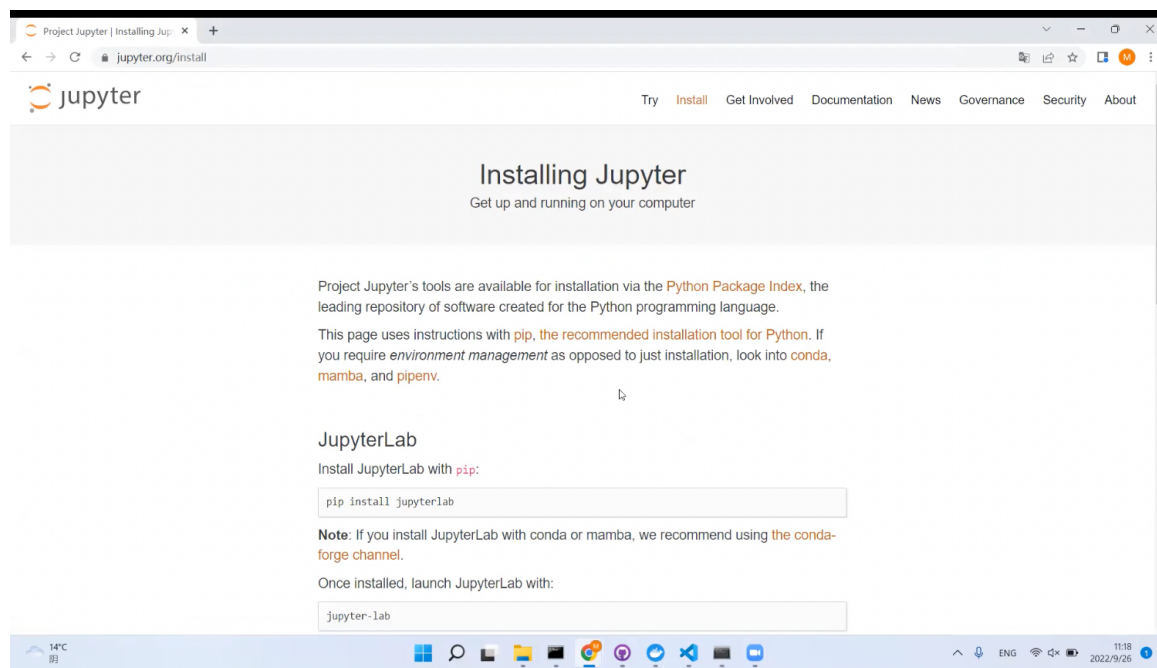

I haven't installed Jupiter on my computer (but he had heard about it before) Yeah. So I saw in Anaconda that it will automatically install

00:36

Observer: so you use Anaconda?

00:38

Yeah goes to google and types "jupyter install" and clicks on the first option (official website)

He opens the terminal and start following the steps

01:10

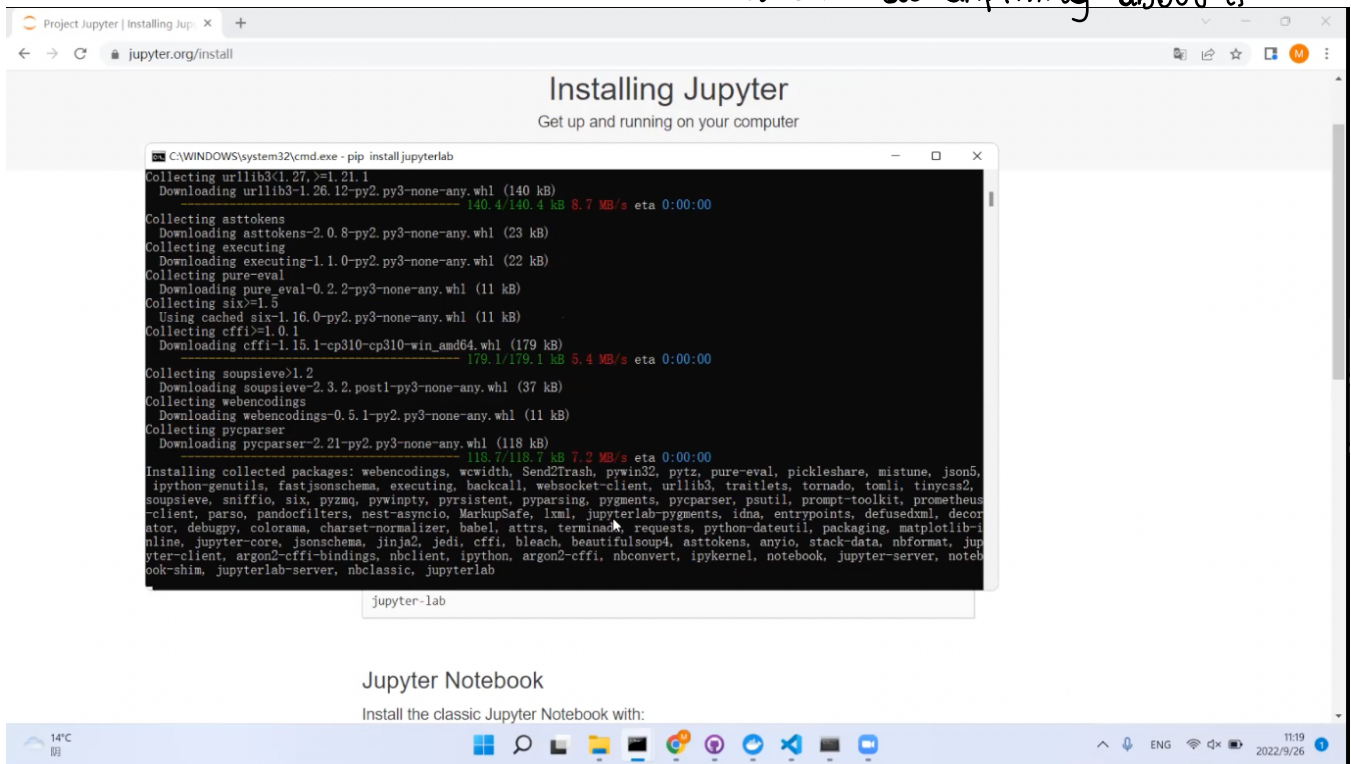

you can see the screen right yeah

02:13

Observer: is something happening?

It just stopped he ran the command from the first step, but the download process runs but it just gets stuck on some part and nothing happens

he doesn't do anything about it

02:17

I think is installing, like so many packages to use

02:29

Observer: Do you usually have like problems when you install like these Python tools?

02:37

Typically Tensorflow, last assignment this semester I used *Google data(?)*

03:04

yeah because normally if I if I'm going to install Tensorflow and it normally would take me one day or more. Sometimes when you when you successfully install it and when you run the script and you find that this version is not compatible...

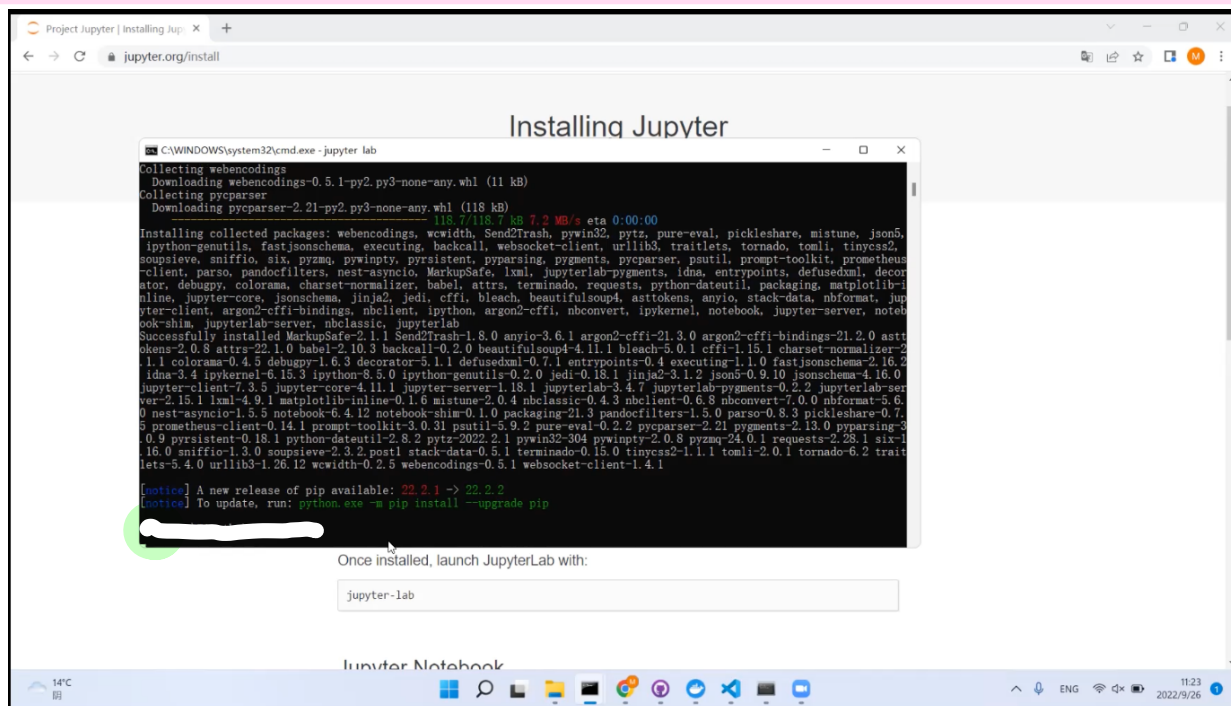

04:55

Observer: when you go like when you're installing some tool and you're going to like How to Install we still do you prefer like the official documentation or something else or it doesn't really matter you just click on it

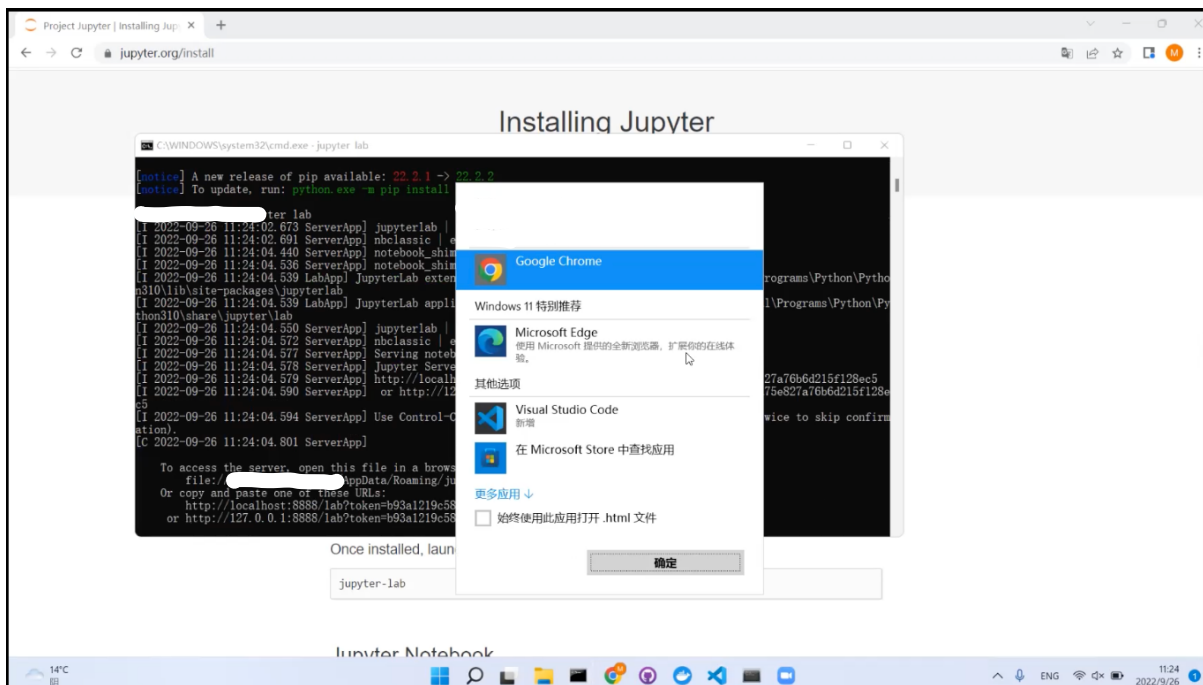

I think I will go to the official website and if I cannot install it and I might look for questions on Stack Overflow and then just look around if there is any solutions

05:55

After 3 minutes the installation goes on and he follows the next steps according to the website

The next step asks him to type "jupyter lab" on the terminal, but when he does that and press "Enter" the terminal once again doesn't show any progress bar for 1 minute. After that it starts showing some messages and the installation is completed

06:08

it's working

07:05

Observer: Okay, did you have any challenges during the installation process?

I don't think so. Yeah.

07:19

Observer: Do you think that that could be some support or like information that could have made the installation process easier?

07:41

I think the installation instruction for Jupyter have is quite clear. Because I just have to run the script on the command and then it will install.

07:57

Observer: So like the documentation, you think it's just, it's good?

08:01

Yeah.
